

# Introducing the **NEW EAGLE OTR DEBEADER**

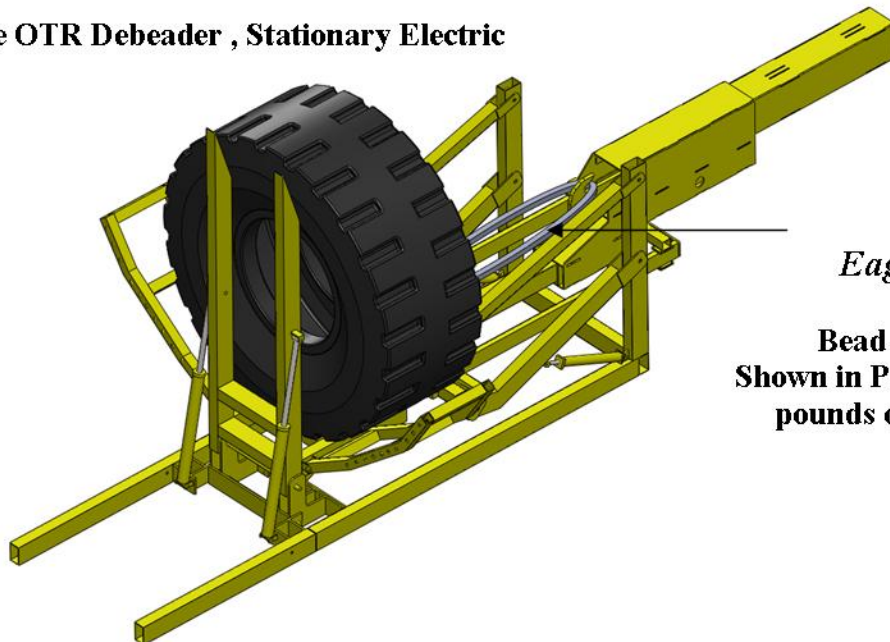

**Now pull the steel bead from giant OTR Tires**

Eagle International has been working diligently to meet the needs of the tire recycling industry with regards to downsizing the giant OTR tires! After attending the Mine Expo 2012 in Las Vegas, Nevada we spent a great amount of time listening to the needs of the people who are looking for a way to recycle the scrap OTR Mining Tires. Eagle has equipment to cut the steel bead section out of these giant tires with the Eagle OTR Bead Remover (steel bead still encased in rubber) but many individuals were interested in pulling the beads from these giant tires to recycle the Bead Bundle.

**Eagle has found the way. Our new Eagle OTR Debeader**, is being introduced to the OTR tire recycling industry to allow tire recyclers with the ability to pull the steel bead bundle from the OTR tires. Recycling the steel bead bundles will add an additional revenue stream to any scrap tire operation. Now they can sell the steel bead section to the steel recyclers and the rest of the tire can be processed with The Eagle downsizing system as seen on our website. **Eagle International Website is as follows: [www.eagle-equipment.com](http://www.eagle-equipment.com) or we may be contacted at (800) 755-8473 or (605) 242-5213.**

Both Eagle OTR Bead Remover and Eagle OTR Debeader are Patent Pending.

## **Eagle OTR Debeader , Stationary Electric**

*NEW  
Eagle OTR Debeader*

**Bead Pulled from 59/80R63  
Shown in Pictures below / produces 490  
pounds or ( of scrap steel per tire.**
